

TAVY TWO-SIDED TILE SPACERS

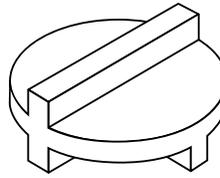

2-Sided Design: Cross and Straight Edge Spacer In One

Each TAVY Tile Spacer is a two-sided spacer. One side is a Cross Edge spacer for use at the intersection of four tiles. The other side is a Straight Edge spacer for use between two tiles. The Straight Edge side is often mistaken as a handle for easy placement. However, the Straight Edge is a fully functional spacer of the same grout line dimension as the Cross Edge spacer.

Cross Edge Spacer

Straight Edge Spacer

Color-Coded: Different Color for Each of Seven Sizes

TAVY Tile Spacers come in seven different sizes. Each size is distinguished by a unique color. Color-coding eliminates confusion between similar sized spacers.

- 1/32" Yellow: The world's smallest spacer. Ideal for marble, granite and other pieces of natural stone.
- 1/16" Green: Traditional size used for marble, granite and natural stone.
- 3/32" Purple: Ideal spacer for 2" x 2" Mosaic Tile Sheets; particularly Daltile and American Olean brands.
- 1/8" White: Commonly used for everyday tile installations.
- 3/16" Blue: Commonly used for everyday tile installations.
- 1/4" Orange: Commonly used for everyday tile installations.
- 3/8" Gray: Commonly used for everyday tile installations.

Reusable: Injection Molded Plastic

TAVY Tile Spacers are durable, washable plastic and float in water for easy cleaning.

Circle/Disk Center: Won't Bottom out in Adhesive

TAVY Tile Spacers are top-set which keeps the spacers at a uniform depth. This eliminates the spacer from bottoming out and becoming totally covered by adhesive. The Circle Design prevents tweaking at intersections and leaves the larger portion of the TAVY Tile Spacer on top of the tile for easy removal.

Easy Removal: Sweep or Kick out

Removal is as simple as kicking the TAVY Tile Spacers out from between the tiles with your foot and sweeping them up. This eliminates the use of tools to remove spacers from thinset or adhesive. There is **NO MORE RISK OF GROUTING OVER TILE SPACERS.**

4 to 1 Ratio: Save Money

TAVY Tile Spacers eliminate the need to stand 4 rubber tile spacers on end around the intersection of four tiles. Now, only 1 TAVY Tile Spacer is all that is needed to ensure a straight grout line at each intersection.

Straighter Lines: Trust the Spacer

Do-It-Yourselfers and tile setters need to simply "Trust the Spacer" by setting their tile as tightly as possible against the TAVY Tile Spacer. This will guarantee a professional result.

USING TAVY TILE SPACERS:

TAVY Tile Spacers can be used in floor, wall and countertop tile installations. The use of spacers cuts down on the need for "eyeing" grout joints and will insure the uniformity of grout joints. Creating consistent grout joints will help increase the visual appeal of any tiled surface.

TAVY Tile Spacers are also helpful when planning the layout of a tile job. The Straight Edge side of the spacer can be used between tiles to determine the accurate starting point for any job. Any Do-It-Yourselfer or professional tile setter can push a row of tiles with accurate grout lines from side to side to determine the best spot to start a given job. This will help minimize odd-sized tile cuts and will maximize the overall visual appeal of the finished project.

TAVY Tile Spacers are best used tiling to a straight edge. The straight edge can be used to help pack the installation tightly. By using our philosophy, "Trust the Spacer", anyone can finish with a professional result and Finish with a Smile.
